DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

The instant invention is distinguished over the prior art of record by providing a method for manufacturing a mounting substrate wherein back face electrodes are arranged on the back surface of the mounting substrate in concentric patterns and wherein each back face electrodes of at least one of the concentric patterns is directly and electrically connected to four neighboring back face electrodes by separate respective plating wires extending from the back face electrode of the concentric pattern

The prior art of record neither teaches nor suggests a combination of limitations recited in the instant claims.

Tashiro teaches forming fine-line pattern 3, on wiring board 5, that electrically connect individual bonding pads 2 to one another through a die pad 1 (FIG. 1), Each bonding pad 2 includes a single fine-line pattern 3 connected to the die pad 1. Tashiro does not, however, disclose or suggest directly connecting a back face electrode to four neighboring back face electrodes using separate respective plating wires that extend from the back face electrode as recited in present claim 1. Instead, Tashiro only discloses a single fine line pattern 3 that extends from each bonding pad 2 to die pad 1.

Since the prior art of record neither teaches nor suggests the combination of steps recited in the instant claims, one skilled in the art would not have been motivated to perform the claimed process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
